Any ice fishing enthusiast knows that hands and feet are the first thing that will cool down when you try to land a lunker on a long sit on the ice. Luckily for all of us, cold weather boots are better every year, with the latest technology and materials included in every pair of boots. Whether you're hiking long distances to the lake or just strolling from vehicle to shelter, there's a boot for you. Read on to learn more about the best ice fishing boots available. 01 out of 10 These camouflage duck hunting style high neoprene boots from Muck Boot are completely waterproof, of course, but also sport fleece lining, soft soles, and insulation, making these comfort boots rated up to -60 degrees. If it gets colder than where you fish, you should probably take this day off! The neoprene exterior gives waterproofing rubber without weight and stiffness. They also have sturdy rubberized plants that are dragged and extra thick for an extra buffer from the ice. 02 out of 10 Although these affordable winter boots from ArcticShield can't sport fantasy trademark names such as Gore-Tex and Thinsulate, they come with all the features you want with great savings. The 8-millimeter liner makes these boots rated up to -40 degrees and the top lace holds snow as you trudge onto the ice. There's also a mid-foot Velcro strap to make sure the boots fit tightly, a consistent issue with other bulky winter boots. The boots are waterproof, not waterproof, so you'll want to keep looking if you have long hikes on the ice or expect to be in very sleet. But for the price, you'll get downloads that will keep you warm in the winter without emptying your wallet. 03 of the 10 boot styling hikes these ice fishing boots from Colombia features dragged soles designed specifically for winter hikes. With 200 grams of insulation, it's not the warmest money boots you can buy, but their sports cut and solid snow and ice traction make them an excellent choice for those fishing in sub-freezing, but perhaps not sub-zero temperatures. The boot is also classy, meaning it can double as winter weather boots across the city without looking out of place. Weighing only 23 ounces, these boots are light compared to many bulky winter boots and won't bore you on long slogs on the ice. 04 out of 10 Although they don't look much different from many other winter boots, they are the most durable in the Baffin line of extreme cold weather boots. Rated as low as -70 degrees, the eight-layer insulation system offers the most cold protection that human ingenuity has to offer. If you fish one of the extremes of the Earth or just zero tolerance for cold, these boots are the ones to capture when the heat is warm an important factor. Boots include a range of Baffin's own technology from Timberwolf Leather and Diamond-Lite insulated top to iceClaw soles for maximum thrust. Continue to 5 out of 10 below. 05 out of 10 Buffin specializes in winter boots for very cold parts of the world, and these Wolf Boots are built for items. The five-layer insulation system with Thermaplus, combined with a cold-resistant sole, creates full protection from cold to -40 degrees. Buckling straps on the ankle and calf cinch top boot as needed for a cozy fit without compression insulation. On top, a blocking cinch snow collar keeps snowing when you are on your way to the ice and back. 06 out of 10 These high-end boots are the type of waders from Muck Boot not only men's boots with a flash of pink. The middle is cut specifically for a woman's feet, but has the same light flexible waterproof 8-millimeter neoprene exterior as the male version. This contouring fit also helps protect against blisters and cracking. Forget about your worries about cold feet in an icy shack: these comfort boots are rated up to -60 degrees. The Arctic sole grip Vibram also provides a reliable thrust on the ice. 07 out of 10 Face It: Most Winter Boots lack style in favor of cold weather performance. These classic boots from Sorel allow you to have it both ways. The duck loading rubber below keeps water and sleet at bay, while the waterproof nylon top does the same. In the style department, the nylon top comes in several different colorways. You get both shape and function in a fluffy sherpa pile of snow cuffs that holds snow by adding a little flair to the top of the shoe. A similar version for women is also available. 08 out of 10 Of these snowboard boot-style winter boots include a boa lacing system that snow sports enthusiasts recognize. The lace-free system gives a comfortable fit without the binding required and makes for a confident, snug fit that is evenly distributed throughout the lace area. It's a proven technology that you'll appreciate when your hands are cold and clumsy. In addition to being 100 percent waterproof, Inferno boots boast an impressive 2,000 grams of thinsulate insulation, meaning you'll be able to withstand long sitting on the ice without letting cold feet be the reason you pack early. However, the manufacturer recommends getting a size if you wear these ice fishing boots with thick socks. Continue to 9 out of 10 below. 09 out of 10 Kenetrek is known for quality in the hunting boot space and these 400-gram insulated winter boots are in the same hunting boot form but are isolated instead. They are 10 inches tall and are equipped with 2.8 millimeters thick skin depending on the top. It's a big boot for an ice fisherman who also wants a very warm shoe that's nimble enough for hiking at the beginning snow. This is because they are completely waterproof and warm enough for a long sitting treestand as well as an ice hut. Strong outsole outsole Provide cravings to help you hike there easily. 10 out of 10 Even the best outsoles are no guarantee of slipping on really smooth, smooth ice. If traction is one of the main problems for you, consider adding a pair of cleats. Steel studded stabilizers from L.L. Bean are an affordable solution that slides on the boots to provide maximum traction when you need it, and easy removal when you don't. My daughter Elizabeth stood on the frozen surface of the lake near our house, staring intently at the hole at her feet. It was Saturday during the bitter winter of 2015, and she kept a surprisingly short fishing rod hanging a metal jig down into the gin-clean water. The jig, flavored with the worm, was perhaps 16 feet below it, just above the bottom of the lake. Under the ice roof, this little bait and bait combination rushed up, then fluttering and falling, over and over again. Elizabeth tried to lure the fish to strike. I turned away to scan the rows of fish traps when she screamed. I looked back to see the little rod bent, Elizabeth cranked on the coil. She soon lifted a lovely yellow perch into the air. It was perhaps 11 inches long, its bright orange pectoral fins set against the forbidden yellow-green flank. The fish was chubby, bulging with eggs. Eater, all around. Elizabeth put him on the snow next to the others. Cold water gives its midwinter gems and we'll have fish fry in our house tonight. There was no other soul in sight. Our loneliness was not a surprise. One old joke about ice fishing is that it's a sport many people try once. This is partly rooted in the truth, and for good reason: for those who have not been introduced in particular to harvest the bounty of a frozen lake, ice can be a foreboding and impenetrable place. Guessing how to bring home fish from the water that you can barely see can seem confusing. Where to fish? And how? What for? What equipment? How do you stay comfortable and safe? The questions may seem intimidating, but most of the answers are simple. SafetyPlunging through the weak ice into cold water (often deep cold water) is more than miserable. It's a quick way to die. Testing iceLocal bait stores will know the conditions, but you can double-check the thickness of the ice by piercing it with a chisel or wireless drill. There are several old timers rules out there about the thickness of the ice and the safety of 2 inches will support a human, 6 inch snowmobile, 10 inch pickup. I add at least 50 percent to these estimates to explain the differences in ice strength and thickness. I started ice fishing at the age of three or four. Nearly half a century later, you won't find me on ice thinner than 3 inches. I can feel it, much more comfortable at 4, and at the end of the year, as the ice rots with the spring weather, I'm even more careful, since even thick ice can get All the ice is the same. Moving water usually does not form strong ice, if it forms ice at all. For this reason, rivers should usually be avoided, except for protected bays. Tip: The easiest problem to handle is a problem that you foresaw and avoid. If there are any doubts about the thickness or safety of ice - as it will inevitably be early and late in winter, and during long thaws - stay on the shore. Safety EquipmentSome anglers add a plethora of safety equipment to their kit, including metal cleats for their boots, lifeline, whistle, hand spikes, and rope with knots or loops at the end attached to the bay or throw pillow that can be thrown at anyone who falls through. I wear ice stud-heavy steel bar about 4 feet long, with a tapered blade at its end. When venturing into new water, I tap it ahead of me on the ice. Solid ice reacts with sharp, solid and encouraging noise. Your ear is getting tuned to sound.ComfortYou will need warm clothing in layers, insulated and waterproof boots and gloves, a good hat, and perhaps a hood too. Glasses are a smart investment to protect your eyes from glare and burning snow. Ice fishing trips can be as spartan or as fancy as you want. My kids and I tend to be spartan, and go out on the ice dragging a sled with kit and bucket or cooler live bait, sometimes adding a backpack or two with a thermos of coffee and food. Others build shacks to live in, or roll on ice on snowmobiles or pickup trucks laden with equipment, food and gas bars. Where FishYellow perch, walleye, trout, pike, crappie, sunfish, largemouth bass is staples of many ice fishing trips. If a pond or lake has a healthy amount of fish when it is not frozen, it will have a healthy number when it is there. Some lakes are better than others. (Good options include Lake Michigan, Lake Champlain of Vermont, and almost everyone in northern Minnesota.) Local bait and gear shops can guide you like other ice fishermen (which are useful online on iceshanty.com). The most famous destinations can become crowded and carnival-like, especially at tournaments. (See above. But many other lakes are like the one where Elizabeth tows the perch, quiet and still, and we don't usually encounter it at all as we fish in what amounts to standard fashion, with some of us setting traps while others move from hole to hole with jigging rod, looking at the fish. How To FishForget about casting. Ice fishing starts with cutting holes. Lots of holes. This requires either a stud, or an oat bucket, a large drill, working manually or a small motor. We use studs at the beginning of the season (for chipping holes) and the power foreshadows as soon as the ice gets thick. There are several well-known auger brands, with disputes between that are competing Ford-Chevy debates. Just like a bit drill, the diameter of the burnt defines the width of the hole. Six inches is good for most fishing, 8-inch inches are popular, and if you're on a lake with huge fish, a 10-inch auger can Sense. But beware: a wider diameter means more work. Childbirth vs. TrapsOnce you have carved holes, you have two main fishing tools: with a fishing rod or through traps. Childbirth is used for vertical jigging, or slightly bouncing baits in water, and dangling live minnows or small larvae. They are usually short and simple, so basic that some people don't even use coils and make jigging sticks in wooden workshops at home. More than a few old shovel handles or hockey sticks have been repurposed this way. My favorite rod is the handle and piece of spinning rod we broke by accident about 35 years ago. It works great. As traps work traps, also known as tilts or window tips, are famous for hooking monster fish. They suspend the large bait for hours in areas where the old, big fish may be hiding. When massive along the drop-off or large beds for days, where the fish often scour, the traps allow ice fishermen to cover far more water than they could with a single rod and erase the handicap unable to throw. Different waters have different rules of how many traps angler can put out. Five per person is common, although we were catching one lake, allowing 15. When the fish takes the bait, its movement rotates the coil of the line, causing the release of a small flag, pointing to the impact. The fisherman then runs into a trap, takes the fish hand over his hand. Every winter there are days when you end up not being able to keep all the tipping box set because you can't find the time running from flag to flag to rebait them. These are the trips that you remember and the reason you are there. Once you hit that zone all you need are two more things: a sharp fillet knife and recipes.
