You save Chrome bookmarks as little odds and ends up buried in a shoebox. Links are for visits often or later. Each of these links can be a precious corner of the Internet for you. That's why it's important to export Chrome bookmarks and maintain them forever. Accidents happen. Fortunately, Chrome allows you to keep bookmarks in one HTML file, and automatically sync them between devices. So let's see how easy time is to back up and export your Chrome bookmarks--both manually and automatically. Chrome makes it easy to back up your bookmarks. It stores them all in one HTML file that you can import into any other browser or other Chrome profile. Let's go through five simple steps. Step 1: Start Chrome. Step 2: Click Chrome Customize and Control (three points in the top right). Select bookmarks by the bookmark manager from the menu. Also, press the right button anywhere on the Bookmarks bar if you can see it. The Chrome shortcut to open the bookmark manager is Ctrl and Shift O. Step 3: In the bookmark manager box, click organize the menu (three points in the top right). Select export bookmarks. Step 4: Chrome opens the File Explorer dialog box so you can save bookmarks as an HTML file. Use this file to import bookmarks to another Chrome browser or any other browser through the import dialogue screen. Step 5: Save this Chrome HTML bookmark file in a designated location like the Documents folder. You can export it directly to a connected flash drive too or save it to the cloud on Dropbox or Google Drive. You can also arrange your bookmarks before you export them by selecting a variety by name in the above menu in the bookmark manager. To restore bookmarks, you just have to import them back into the browser from the same bookmark manager window. Click on the three points in the top right corner and then select the import bookmarks. Chrome will display an open file dialog. Go to the bookmark HTML file, select it, and then click on Open to import bookmarks. All your bookmarks will be extracted. There is another way to manually back up your Chrome bookmarks. You just have to make an effort to find a hidden folder in your Windows PC or macOS. Then copy and insert the Bookmarks file from the Chrome profile folder to another safe location. Follow the steps below. Drill up to a folder of user data on your computer. This is the default location for the entire browser profile (includes bookmarks, passwords, extensions, and settings). In Windows 10, 8, 7 and Vista, the default location is: C:\Users (AppData) Local (Google) - the default user data in macOS, the location by Your_Username default: Users\Your_Username/Library/Support For both ways, replace the username with the username you're using on your computer. Steps to back back Chrome bookmark manually in Windows 10: Close chrome browser. Go to the file-imem researcher and turn on the Your_Username\Your_Username\Your_Username A view of hidden elements. (You can also do it from folder Options, see you) Go on the path mentioned above and shown in a screenshot from Windows 10. Copy and save the bookmark file elsewhere. To recover, copy the same file from the backup location and insert it into the default folder. What if you have multiple Chrome profiles? If you share a computer, maintaining individual Chrome profiles with their own bookmark set is always better. The user's data folder has a folder for each profile you create in Chrome. If you only have one profile, this folder will be called by default, as you see above. If you have more than one profile, folders will be listed with profile names. You'll also notice that there is another file called Bookmarks.bak in the same place. This is the latest backup of a regular bookmark file created by Chrome at the last browser to open. It re-records every time you run a new browser session. If your Bookmarks file ever disappears or is damaged for any reason, you can restore all the bookmarks saved from that backup file. Simply rename the backup file by removing the .bak file extension. Your Google account serves as a hub for synchronizing bookmarks and other browser settings on your devices. If you have multiple computers and Android or iOS devices, you can not only sync the entire profile, but also choose what you want to include or exclude. Step 1: Open Chrome and click on more of the set-up. Step 2: Sign up for the Google account you want to use with Chrome. Step 3: Go to the people. Click on the tiny arrow to sync and Google Services. Step 4: On the next screen, click the arrow to synchronize control. You can also explore encryption options for added security. Step 5: If you want to sync everything in your Chrome profile, then keep syncing all the switch is on. Step 6: Want to sync specific data? Turn off the synchronization and go down the list to include the profile information you want to sync. Additionally encrypt Chrome bookmarks and other synchronized data. Protect your data with a Google account phrase or a custom phrase for added security. You will need to enter the same formulation in chrome installs for all devices that you want the data to sync with. Even if you lose tabs in one device, you can get it with simple synchronization. Click happy fingers can remove the entire can of links at a time. There is no cancellation button in the browser or bookmark manager. You understand how You'll miss your bookmarks when you don't have them (try a browser where you don't have them around!). That's why it's important to know how to keep tabs in Chrome when a disaster happens. You can also use cross-browser bookmarking tools to keep bookmarks synced in all your favorite browsers like Chrome and Firefox. How to combine multiple ISO ISO In one download iso image If you have multiple Live CDs to restore your desktop, consider using MultiCD to compile them into one disc for convenience. About author Saikat Basu (1538 Articles Published) More from Saikat Basu bookmarks in Google Chrome are useful in finding frequently used or important pages without searching, but they can accumulate over time. Whether you accidentally bookmarked a single page you want to delete, or want to delete all Chrome bookmarks right away, you can do so on your computer or in the Chrome mobile app. Bookmarking is a system used by web browsers such as Chrome to make it easier to find certain web pages. Instead of writing down a long universal resource locator (URL) or searching a page every time, you can click one button in Chrome to bookmark any web page to access later. If you end up with too many bookmarks to manage, you can organize them into folders or delete ones you don't use often. Pras Boonwong/ EyeEm Chrome bookmarks are easy to create, intentionally or accidentally. You can accidentally bookmark a page when you try to enter a new URL, open a new tab, or interact with one of your plugins. When this happens, it is a good idea to remove the bookmark to avoid clutter immediately. Another reason to remove bookmarks is that they accumulate over time and you may end up with an unmanageable mess of old bookmarks that you no longer need. If you're ready for a fresh start, remove all bookmarks in one fell swoop. There are two ways to remove a Chrome bookmark: by bookmarking a web page yourself and by using Chrome's bookmark manager. Going to bookmark a web page provides the quickest way to remove a bookmark if you only have one or more to delete. Here's how: Open the Chrome web browser on your computer and go to the web page you want to remove from your bookmarks. When the page opens, click or click on the solid star at the right end of the URL bar. The star is solid on the bookmark of the web page. If the star is hollow rather than solid, the page is not a bookmark. In this case, clicking on the star bookmarking web page. Click Delete in the drop menu to remove the tab on the web page. If you don't remember the bookmark URL you want to delete, you can find it in the Chrome Bookmarks manager. Here's how: Open Chrome and type chrome://bookmarks/ into the URL box. Find the bookmark you want to remove. If you have several folders listed in the sidebar, you may need to review a few folders to find it. If you don't see the bookmark while scrolling through the list, use the search box at the top of the bookmarks manager to find it. Tap or tap : (three dots) to the right of the bookmark you want to remove. You can also click on the bookmark and remove it to click on the : icon. Click or click Delete in the pop-up menu. Repeat this process for every additional bookmark you want to remove. If you want to delete everything Chrome bookmarks and start over, you do it with the help of a bookmark manager. Here's how to remove all Chrome bookmarks at once: Open Chrome and go to the bookmark manager by entering chrome://bookmarks/ in the URL box. If there are several folders in the sidebar, select a folder that contains bookmarks you want to remove. The folders in the sidebar are independent of each other, so you need to remove each one separately if you want to remove all bookmarks. Click on the bookmark list and enter CTRL-A (Mac Command) on the keyboard to select each bookmark in the folder. All of them should be allocated. Click Delete. This process cannot be reversed. If you have other bookmark folders to remove, click on the next folder in the sidebar and repeat the process. The bookmark removal process is different in the Chrome mobile app. Open the Chrome app on your mobile device. Click the three-point icon to open the menu. Click bookmarks in the menu, if you have multiple folders, click the folder to open it and display the bookmarks it contains. Remove one tab by swiping left on it and clicking Delete. To remove multiple bookmarks, click Edit and click each one you want to delete. Click Delete.
