Project managers are usually quite organized (at least one I know of); it's just what happens to the territory. A project management source has come up with a good list of 101 different ways project managers keep themselves together. Here's my personal favorite: Creative Solutions: A Japanese Story - when a little girl continued to wear the wrong shoe on the wrong leg, her parents found a solution. There was half a smiley face on any shoe. The smiley face was only completed when she wore the shoes the right way. The problem is solved. It can be as simple as that if we use our creativity. There's a ton of good tips here, all totally focused on making you more productive, organized, and just generally more kickass kinda person. Project Management Lessons: 101 Ways to Organize Your Life (Project Management Source) This story appears in the May 2001 issue of Entrepreneur. Subscribe Using a software application to help manage your projects should not be more work than the project itself. Unfortunately, in many cases this is the case. And, at first glance, the FastTrack Schedule Version 7.0 from AEC Software looks as if it may require more effort than you expected. However, this project management tool offers many features that can make monitoring projects less of a headache. Version 7.0, the latest software update, is available for \$299 (street). It adds additional customization options and new ways to view the project timeline. It also has a compatible version for your Palm laptop computer, available for \$99 (street). The Palm version offers a limited number of features available in the desktop version, but it allows you to create and edit graphics. The desktop version is really much more reliable. The interface is busy- it can be overwhelming at first, but once you spend some time navigating through the app and its numerous features, you'll learn just what FastTrack can do. For example, you can track the progress of a project by entering different tasks and setting deadlines. You can also track the hours and amount of money spent on each project. New in version 7.0: a calendar view that allows you to see the project chronology in a traditional calendar, not just the Gantt chart. The tracking feature also has a critical path marker that highlights the task trail with the least flexibility to change. FastTrack 7.0 also adds resource tracking to track all the people, equipment, and resources needed for projects. Using the resource calendar, users can set individual work calendars for each person or each equipment involved in the project. Each person or piece of equipment may be assigned to a specific task (issues such as release or maintenance of equipment can be taken into account) and the information can be displayed on the bar chart. Also among the new features in version 7.0 are a quick-look balloon, a quick-range palette, a web help section and and Microsoft Project 2000 Exchange Wizard. The fully functional version is available as a free download, but users won't be able to save the files. Registered users of Version 6.0 can upgrade for \$129.Liane Gouthro, a former technology reporter at PCWorld.com, freelancers from her home in Brooklyn, Massachusetts. The Institute for Project Management, a single certifying body, offers eight different certificates. Be prepared to do a lot of reading. Here are a few examples, as well as some tips on when you can choose this particular certification: Certified Project Management Officer (CAPM) -- If you don't have project management experience, you can get this certification with 23 hours of PM training. CompTIA Project - Another certification for novice project managers with little or no project management experience. Certified Scrum Master (CSM) -- If you're interested in agile project management, this is a great choice. Small companies may be willing to engage you in the role of project management without certification or a lot of experience if you can make a compelling case that you would be good at the job. Even if you are unable to gain project management experience, just working in a project team can be enough experience for some certificates. This is especially true if you are involved in different stages of the project. Take the certification exam After you have completed the conditions for your chosen exam, it's time to spend some time studying. There are a lot of books and exam-specific materials out there. Find exam-related preparatory elements and spend some time studying. You will need to know your stuff and be able to apply it in practical situations to get a PM certificate. You are a certified project manager and, if you like, you can start looking for a full-time job in project management. Consult your certifying body's website for information about continuing education. Some courses will also list their value in the Continuing Education Units (CEUs). PMI rates are a good example. Many certificates have three or five years of continuous education requirements, so be sure to check what they are before deciding on a particular program. Become a project manager Once you have been certified and have met your continuing education requirements, you are ready to start your life in professional project manager!
